★ FREE PROMPT PACK · THE AI CUT

# AI Video Script Prompt Pack

from brief to script in 8 prompts

The prompts I use to go from a messy product brief to a script people watch to the end. Copy, paste, fill in the [green brackets]. Works in Claude or ChatGPT.

01 Turn a messy brief into the 3 answers

02 Get five hooks, keep one

03 Build the beat sheet

04 Write the first draft

05 Kill the generic

06 Cut it to length

07 Read-aloud and voiceover check

08 Hooks for every channel

Marcin Struzik · AI Motion Designer

**How to use it:** run the prompts in order, in one chat, so each step builds on the last. Paste the brief once at the start. Everything in `[brackets]` is yours to fill in.

Pairs with the free **Product Video Brief**: fill that in first and prompt 01 gets ten times easier.

## 01 Turn a messy brief into the 3 answers

*Start here, before you ask for a single line of script.*

```
COPY · PROMPT 01
You are a senior product marketer preparing a SaaS product video.

Below is everything I have about this video: brief, notes, Slack threads, PRD, old scripts.

[paste your brief or notes here]

Extract only three things, one sentence each:
1. The problem this audience is actively trying to solve right now (their pain and the specific friction, not our solution).
2. The frustration or risk that should open the video.
3. The #1 takeaway if the viewer remembers only one thing.

Then list what is missing or contradictory in the brief that stops you answering any of these with confidence. Do not write any script yet.
```

> **Tip** If an answer takes more than one sentence, the message is not decided yet. Fix that in the brief, not in the edit.

## 02 Get five hooks, keep one

*Asking for variation and choosing beats asking for perfection once.*

```
COPY · PROMPT 02
Using the three answers above, write 5 different opening lines for a [60]-second product video for [audience].

Each hook must use a different angle:
1. The pain, in the viewer's own words
2. The risk of doing nothing
3. A question they are already asking themselves
4. A contrarian take on how this is usually done
5. The outcome, shown as a concrete moment

Rules: max 15 words each. Never start with "Introducing", "Meet" or the product name. Start with the viewer, not the product. Write how a person talks, not how a press release reads.
```

> **Tip** Four of the five get thrown away. That is normal and faster than polishing one mediocre line.

## 03 Build the beat sheet

*Structure before sentences.*

COPY · PROMPT 03

```
Hook chosen: "[paste the hook you picked]"

Build a beat sheet for a [60]-second video using AIDA:
- Attention: the hook and the friction (0-[x]s)
- Interest: the product in one clear line
- Desire: max 3 benefits, each tied to one feature we can show on screen
- Action: one CTA: [Start free trial / Book a demo / ...]

For every beat give: seconds, the single idea, and what is on screen. Keep the whole thing
about one idea: [the #1 takeaway].
```

## 04 Write the first draft

*Two columns, timed for a real voiceover.*

COPY · PROMPT 04

```
Write the script from this beat sheet as a two-column table:
VOICEOVER | ON SCREEN

Pace: about 2.3 spoken words per second, so [60] seconds ≈ [140] words of voiceover max. Count
them and show the total.
Short sentences, one idea each. Plain words a [role] would use in a Slack message.
On-screen column: real UI moments, text callouts (max 5 words) and transitions, not vague
"show the dashboard".
```

## 05 Kill the generic

*The pass that makes it sound like a person wrote it.*

COPY · PROMPT 05

```
Review this script line by line and rewrite anything that could appear in any competitor's
video.

Flag and replace: "all-in-one", "seamless", "powerful", "revolutionize", "unlock",
"effortless", "game-changer", "in today's fast-paced world", and any sentence that describes a
feature without saying what changes for the viewer.

For every change show: original → rewrite → why. Keep the length the same.

[paste script]
```

## 06 Cut it to length

*One script, three runtimes.*

```
COPY · PROMPT 06
Cut this script into three versions: 90s, 60s and 30s (≈ 205 / 140 / 70 words of voiceover).

Rules: the hook and the CTA survive in every version. Cut benefits before you cut clarity. The
30s version keeps one benefit only, the strongest one for [audience].

Show what you removed in each version and why.

[paste script]
```

## 07 Read-aloud and voiceover check

*Catch it before the voice actor or ElevenLabs does.*

```
COPY · PROMPT 07
Read this script as a voiceover artist would. Mark:
- tongue-twisters and awkward consonant clusters
- sentences longer than one breath (over ~18 words)
- numbers, acronyms and product names a voice (human or AI) could mispronounce, with a
phonetic spelling
- places where a pause would land better (mark with  ... )

Return the cleaned, VO-ready script.

[paste script]
```

> **Tip** If it goes to ElevenLabs, punctuation is your direction: commas and ellipses are pacing, not grammar.

## 08 Hooks for every channel

*Same video, different first 3 seconds.*

```
COPY · PROMPT 08
Here is the final script: [paste script]

Write alternative first lines and on-screen text for:
- Homepage hero (sound off, captions only)
- Paid social, vertical 9:16 (must stop the scroll in 1-2s)
- LinkedIn feed (B2B, professional but human)
- Sales / outbound (sent 1:1 to a prospect)

For each: the hook (max 12 words), the on-screen text (max 5 words), and what to show in the
first frame.
```

## What it looks like in practice

*An invented example, built the same way I work on real launch videos.*

BEFORE · STRAIGHT FROM THE FEATURE BRIEF

~~"Introducing our new Smart Scheduler, the all-in-one solution that helps teams book meetings faster than ever."~~

AFTER · PROMPTS 01 AND 02 FIRST

"Six emails to find one free hour? That back-and-forth is the worst part of booking a meeting, and it's the first thing Smart Scheduler gets rid of."

Same feature, same product, same length. The only change is where it starts: not with the product, but with the moment of friction the viewer was in five seconds before they pressed play.

### What stays human

The one decision I never hand over is which single idea the video is built around. AI is great at options and structure. It does not know which option matters most to your audience this month, because that comes from customer calls and watching which features people struggle to explain to their own teams.

Let the prompts do the legwork. Keep that call for yourself.
